Cornerstone/Idexx Runtime error - registry fix

This is only a Cornerstone/Idexx issue due to the version of VPR they are using, with windows 10.

Error reads:

Run-time Error 35006
The name is not in use for a subkey or named value.

Simple fix, is to run the registry file in the zip attached to this document. This will add the necessary registry entries to resolve the problem. They will just need to unzip the IERegistry.zip file and double click on the .reg file.
